TotalFunction

Is your organisation utilizing technology for your employees? Or is it the other way around?

We believe that technology needs to strengthen people in their lives. That also concerns the professional lives of your employees. Technology is changing so rapidly that most companies are lost in what should be the best solution for them!
With our exclusively developed FEAPA Method ™, we can help your company and your employees to become a futureproof innovative, and most important, a more effective organization!

Totally Integrated

&

Multidisciplinary Approach!

TotalFunction

Totalfunction Projects Group is an independent consultancy-, design- and project company. We have long-term experiences with a large variety of projects in the Oil&Gas, Energy, Utilities Food&Beverage and Traffic & Logistics markets. The general topic that all of our projects have in common is, is that technology needs to be supporting people instead of the other way around.

Where do we make the difference?

TotalFunction has extensive multidisciplinary knowledge and experience in all areas of Control Rooms (and / or Control Centres), such as design, consultancy and project support, Ergonomics, Human Machine Interaction (HMI), process visualization, alarm management and operations and automation concepts / philosophies.

This also involves centralizing and integrating Control Rooms, as well as Remote Control, with accompanying control and guidance for the development of the (new) technologies required for this.

It is important for Operations and for the Operators that during the period of modifications and / or phased realization of growth plans, that, for Control Rooms and its (operational) work places , hindrances should be minimized. To reach this objective, we often use a flexible and modular Control Room concept based on system independent operator desks and flexible integrated User Interfaces.
